ABSTRACT

The emphases of this paper are identification of system mechanisms and processes employed to achieve and enhance racial resegregation in education, placing an understanding of these mechanisms and processes within the context of the national desegregation efforts, presentation of the rationale for the National Institute of Education including resegregation as a program effort within the Desegregation Studies Unit, review of current research findings and analyses in the areas of resegregation, and presentation of NIE priorities in this area. Some of the processes which facilitate resegregation are considered to be white flight, the disproportionate use of suspensions and expulsions against minority students, tracking, grouping on a racial basis, the use of test scores, and the mechanism of pushing out minority students and educators from the school system. Key researchable questions in the areas of white flight, suspensions and expulsions, and testing, tracking, and ability grouping are noted. (Author/AM)

RESEGREGATION: A SECOND GENERATION SCHOOL DESEGREGATION ISSUE

Preface:

This paper on issues in school resegregation is presented as both a position paper and the formulation of the research agenda for the Desegregation Studies Unit, National Institute of Education. It has as its basic purposes the following: 1) To identify system mechanisms and processes employed to achieve and enhance racial resegregation in education; 2) to place an understanding of these mechanisms and processes within the context of the national desegregation efforts; 3) to present the rationale for the National Institute of Education including resegregation as a program effort within the Desegregation Studies Unit; 4) to review current research findings and analyses in the area of resegregation; and 5) to present the N.I.E. research priorities in this area.

The National Institute of Education (N.I.E.) was created by an Act of Congress in 1972. The Institute was given the mandate to attack critical problems in American education through research and development. In response to this mandate, N.I.E. has developed a strong research and problem oriented program responsive to the concerns of Congress, the educational community, and the lay public. N.I.E. has appropriately stated:

America's future is its children. The quality of education they receive, and the degree to which such schooling prepared them for later life will determine what the future will be.

In a number of areas across the nation, a variety of mechanisms have been operationalized which have the effect to reestablish separate and segregated schooling for white and black children. Some of these processes and mechanisms which facilitate resegregation are 1) white flight residential relocation by whites which has the consequence of diminishing the number of white students in the city schools or the withdrawal of white students from the public school system as a means to avoid desegregation; 2) the processes of "pushing out" through a variety of mechanisms both minority students and educators from the school system; 3) the disproportionate use of suspensions and expulsions against minority students; 4) the tracking of minority students into curriculum areas different than those emphasized for white students; 5) grouping or assigning students to classes and other school activities on a racial basis so as to maximize racial separation; and 6) the use of test scores as a basis for the resegregation of students along racial lines.

It is the concern of the Desegregation Studies Unit to learn more of these processes and mechanisms in order to assist school personnel in their efforts to desegregate our nation's public schools.

PART 1

Background:

Twenty years after the momentous Brown v. Board of Education decree of the United States Supreme Court, a number of problems related to school desegregation have emerged. While some were associated with the first steps at achieving desegregated public school systems, others, frequently termed "second generation" desegregation problems, have come into prominence.

These second generation desegregation problems are a reflection of the failure of public education, in significant ways, to achieve the goals expressed in the Brown decision. Much of our present failure has been due simply to the lack of preparation within both the educational and larger national communities to receive Americans of all backgrounds into full participation of public education. Another part of the failure, however, has been the deliberate efforts by some to forestall desegregation and to minimize its effectiveness when it does occur.

Prior to 1954, de jure segregation, separate and unequal, was clearly the law of the land in the South. Outside of the south, de facto segregation appeared to be more nearly the norm. In the south, racially separate schools were decreed by law as well as by custom. In the non-south, discriminatory residential patterns, employment policies, and the establishment of school lines to minimize the servicing of separate and distinct racial and economic groups almost replicated in reality the conditions of the South. The assumption that segregated schools in the non-south is primarily a de facto phenomenon is presently being tested in the courts.¹ What has been assumed to be de facto segregation in the non-south is frequently being proved to be de jure instead.

1. On June 21, 1974, the Federal District Court in Boston found that the Boston School Committee had unconstitutionally fostered and maintained a segregated school system. "The ruling was a sweeping condemnation of the Boston School Committee policies which the Court found has been 'knowingly' designed to foster segregation." (p.siv) Desegregation the Boston Public Schools: A Crisis in Civic Responsibility. United States Commission on Civil Rights, August, 1975. Denver, Indianapolis, Pontiac, and Waterbury, Connecticut are other cases in which the court found the existence of de jure segregation in the non-south.

Given this background, it is not at all surprising that the efforts to achieve desegregated public education have encountered difficulties. Furthermore, it has been the minority students and educators who have borne the brunt of resistance to their full participation in the educational sector of our society. It is they who have been the targets of the vast majority of efforts at resegregation.

Resegregation Processes: White Flight

The significance of "white flight" as a phenomenon influencing possibilities and potentials for school resegregation can be seen in the following tables (cf. 1-3). As is evident, changes in the racial composition of American cities is not due primarily to changes in the natural increases in racial groups, but rather to the outmigration of whites. Consequently, opportunities for school integration diminish as the racial proportions in the cities change with the exodus of white residents. Table 4 focuses more specifically on the school districts themselves, both in the northern and southern regions of the country. As is evident from the forty cities in Farley's sample, white enrollment declined in all but three instances between the years 1967 and 1972. Such data give evidence of what is a broad based movement currently underway among certain segments of the American population.

The fact that such population shifts are occurring has not been lost on the American public. The concept of "white flight" is now one that

accepted as part of the general discourse. Consider excerpts from the following article, written on October 15, 1975, published in The Washington Star newspaper, and entitled "Dallas--Whites Fleeing in the Face of Integration":

"Dallas has been a classic example of white flight in the past ten years, as the inner city has become progressively blacker and the suburbs whiter. This year for the first time, white students became the minority in the 136,000 student Dallas Independent School District. The breakdown now is about 40 percent white and 60 percent other races..... a few years back it was just the opposite."

Likewise, consider the following data on changes in white enrollment in the Memphis, Tennessee, public schools. The dramatic shifts of the past few years has exacerbated difficulties in creating and sustaining viable integrated school settings. (Note: The Federal District Court order for the desegregation of the Memphis public schools was implemented on January 24, 1973.)

Jan. 1975	29.2/70.8	- -	- -	116,098

Source: Edgerton, John "Public School In Memphis: Struggling, But With Head Well Above Water," Southern Journal, Spring, 1975, p.3

In any discussion of white flight it is important to note that not all "flight" necessarily implies geographic relocation. One increasing prevalent process at work which fosters resegregation is the "flight" of white students into private schools. Again, referring to Memphis, 35,365 students were in private schools during the 1974-1975 academic year. That number represents nearly a 20,000 student increase since the implementation of the desegregation plan for the public schools. On a state wide basis, the following table suggests, for selected states during 1973-1974, the number of white private academies as well as the total number estimated for the state. Though these figures are only approximate, they do suggest the dimensions to which "flight" has occurred.

Table 6
Number of White Academies and Enrollments for Selected Southern States, 1973-1974 (approximate figures)

STATE	NUMBER OF ACADEMIES	ENROLLMENT
Louisiana	464	156,000
Kentucky	310	70,000
Alabama	300	26,500
Texas	775	125,000
Florida	600	140,000
Mississippi	200	65,000
South Carolina	185	47,000

There is one additional piece of information that, at least indirectly, sheds light on the size of the private school sector in the United States. There are approximately 18,500 private elementary and secondary schools in the country. Of this number, it is known approximately 13,500 have an established policy of open admissions. There are an additional 2,500 where the enrollment policy is unclear, and there are 2,500 which have an explicit policy of non-open enrollment. It is anticipated a sizeable majority, if not nearly all, of these non-open enrollment schools are private white academies.

Resegregation Processes: The Displacement of Black Educators

During the dismantling of the dual school system in the South, many black educators were demoted or dismissed altogether. New criteria of hiring and promotion as well as new retention procedures worked to the disadvantage of this group. Smith and Smith (1974) estimated that by 1970 in the seventeen Southern and Border States, 31,584 black teachers were displaced by discriminatory hiring and dismissals. Their data are presented in more detail in Tables 7 and 8 to follow. The consequences of such procedures are not only detrimental and destructive to the black community, but to the possibilities for generating and sustaining integrated faculties in the public schools of these states.

Resegregation Processes: Student Suspensions and Expulsions

In an extensive analysis of both the extent and the dynamics of student suspensions and expulsions, School Suspensions - Are They Helping Children, a 1975 report of the Children's Defense Fund,

provides ample data on the scope of this problem.² The report noted that more than one million students were suspended at some time during the 1972-1973 academic year. The largest majority of such suspensions were concentrated in the secondary schools where on the average, one of every thirteen students was suspended at least once. Black students during this time period were suspended at more than twice the rate of any other racial or ethnic group. The report interpreted this rate in the following fashion. They suggested it was due "in large parts to the result of racial discrimination, insensitivity, and ignorance as well as part and parcel of a pervasive intolerance by school officials for all students who are different in a number of ways." (p. 9) Tables 9 through 11 report pertinent data from the Children's Defense Fund study.

Though the data in the study are two years older than that of the Children's Defense Fund study, and the number of school districts in the sample somewhat smaller, comparable findings were reported by the National Educational Association's study of 1,227 of the 2,831 school districts it surveyed during the 1970-1971 academic year.³ Among the findings reported in this study, the minority expulsion rate was:

--double the non-minority rate in 31 districts;

2. Data for this report of the Children's Defense fund was based on the 2,862 school districts throughout the country who responded to a special survey of the Office of Civil Rights, Department of Health, Education and Welfare. The survey was conducted in 1972 and 1973.

3. 1971 Survey of Minority expulsion in 2,831 Districts, NEA Teacher Rights.

--triple the non-minority rate in 26 districts;

--quadruple the non-minority rate in 16 districts;

--five to ten times the non-minority rate in 49 districts;

--greater than ten times the non-minority rate in 25 districts.

But there is another story as well. The levels of suspensions and expulsions are not uniform throughout the country. One finds significant variations both between cities of different states as well as between cities in the same state. Consider findings of Tables 12 and 13.

If, as it has frequently been suggested, the characteristics of the black students prompted their suspension or expulsion, we would not expect to find such wide variations, even to the point where black students are not suspended disproportionately. As the Children's Defense Fund noted in this regard, "Whether administrators consciously enforce different forms of segregation, whether they merely reflect community values and attitudes, or whether they fail to deal flexibly and creatively with curricula, teacher training, and modes of maintaining a good learning environment, it is the behavior of school administrators, rather than the behavior of children, which is in question." (p. 70)

Resegregation Processes: Test, Tracking, and Ability Grouping

The task of developing mechanisms and procedures for achieving the goals and objectives of American education is immense. No less so appears to be the task of developing tools for accurately assessing whether and in what degree those goals are being met. Our current measurement procedures leave many dissatisfied. William Raspberry, an editorialist for the Washington Post, began his October 11, 1975 editorial:

A perusal of the July-August (1975) issue of the National Elementary Principal Magazine might leave you wondering how standardized tests have managed to survive. In eighteen articles and an editorial, the magazine devotes to the subject, it is hard to find a single kind word for standardized tests.

Raspberry also noted that much the same conclusion could be drawn from the March-April 1975 issue of the magazine where the focus was on I.Q. test.⁴

Though the concern over testing and its effects on children is growing, there does not appear to be a retreat from its use, nor of its central role in determining the creation of classroom groupings. As was reported in the findings of a national task force on the effects of test scores as they impinge upon ability grouping:

1) Although unqualified approval of ability grouping is widespread among teachers, disproportionate numbers express a preference for teaching mixed, average, or superior classroom groups over teaching lower achieving groups.

2) The effect of ability grouping on the affective development of children is to reinforce favorable self-concepts of those assigned to high achievement groups, but also to reinforce unfavorable concepts in those assigned to low achievement groups.

3) The findings of the impact of ability grouping on classroom groups have implications for residential segregation and schooling tied to it. The issues underlying ability grouping and desegregation are deeply embedded in our society and its culture.

The matters reported here are integral parts of a larger social

4. If one looks back in this same magazine two years earlier, the following comments are offered in an editorial on evaluating school personnel:

"The evaluation of school personnel is, by its very nature, a complex and difficult task. But we should expect no less of an endeavor that requires us to judge human behavior in an objective and rational manner. However, it seems to us that much of the recent controversy concerning evaluation reflects our current confusion and disagreement on the goals and objectives of education."
National Elementary School Principal. February, 1973. p. 10

pattern, contributing to the perpetuation or change of that pattern, but largely determined by it.⁵

There is an admitted difficulty in discussing the interrelations of ability grouping, testing, and desegregation. There appears to be no national and systemic research on this topic. Rather, what is available are a number of studies that focus on particular communities. Unfortunately, little recent research has been uncovered, i.e., post 1972. Thus there is an extrapolation here from older studies, and the assumption is made that the basic processes and dynamics have remained operant. Furthermore, the available evidence suggests that the use of ability grouping and curriculum tracking is national, rather than regional, and affects other minority students as well as black students.

As evidence of the ways in which resegregation does occur through tracking, consider the findings of the 1964 study by Gunthrope of Copeague Long Island School District.⁶ Three tracks were used in the school district at the junior high level. Track "A" was the highest track. The racial composition was as follows:

	Track A	Track B	Track C
Black Students	10%	22.6%	33.3%
White Students	90%	77.4%	66.7%

-
5. Hall, Morrill "Ability Grouping, 1970: Conclusions and Recommendations. Center for Educational Improvement, University of Georgia, 1970, p.3
 6. Gunthrope, M. B. A Comparison of Negro and White Student Participation in Selected Classes of a Junior High School Program. Unpublished doctoral dissertation, New York University, 1964

What makes these findings particularly provocative is that in assessing the achievement test scores of the black and white students in the seventh and eighth grades, no statistically significant differences were to be found. Black students were simply not being classified according to their actual scores.

In the now famous court case of Hobson v. Hansen, involving the Washington, D.C. public schools, the following data was presented indicating the interrelations of race, social class and tracking.

TABLE 14

Percents of Students in Four Tracks in Washington, D.C.
High Schools, Serving Different Socioeconomic Levels
of Neighborhood 1964 - 1965

Median Neighborhood Income	Special	General	Regular	Honors
Over \$7,000	0-7.4	7.8-43.7	46.1-80.0	10.2-17.1
\$5,000-\$7,000	4.7-9.9	39.0-57.7	32.9-49.2	
Under \$5,000	9.8-18.2	54.4-74.5		

Source: Findley, Warren G, Ability Grouping: 1970, Status, Impact and Alternatives, Center for Educational Improvement, Jan., 1971, p. 46.

Perhaps one of the strongest sets of data regarding the impact of variables such as race and social class on placement in one grouping or another comes from the study of the placement of educable mentally retarded children. Consider the following chart:

TABLE 15
Summary of Enrollments in Educable Mentally Retarded (EMR) Classes
in 1973-74 in Five States¹

STATE	Number of Districts Analyzed	Number of Districts Reporting EMR Classes	Percent of Total, White and Black Enrollments in EMR Classes			Number & Percent of Districts which have		Number of Districts with 5 percent or more of their total, White and Black Enrollments in EMR Classes			Number of Districts where probability that Blacks would be in EMR Classes 5 times greater than for Whites	Number of Districts where probability that Blacks would be in EMR Classes 10 times greater than for Whites
			Total	White	Black	Majority Black Enrollments	Majority Black EMR Classes	Total	White	Black		
ALABAMA	112	108	2.3	1.5	4.0	21 (19.4)	67 (62.0)	1	2	56	29	12
ARKANSAS	140	70	2.0	1.1	3.6	23 (32.9)	57 (81.4)	5	0	26	28	6
GEORGIA	151	148	2.5	1.0	4.8	53 (35.8)	129 (87.2)	21	0	85	67	21
MISSISSIPPI	127	103	1.8	.8	2.6	51 (49.5)	90 (87.4)	4	1	23	36	8

Source: Children's Defense Fund, Children Out of School. 1974. p. 103, Washington, D.C.

The cumulative impact of data such as these is that ability grouping and tracking can have a devastating impact on the ability of school districts to create and sustain truly integrated educational settings. When mechanisms are created which separate students into categories, and those categories come to have as one of their unanticipated (or anticipated) consequences the reinforcing of divisions between racial groupings in schools, the difficulties for achieving stable integrated milieus are enhanced. Furthermore, we have reason to believe that the long term consequences of such tracking and grouping are profound for life chances and adult opportunities. Thus we believe there is a need to 1) understand these processes within the schools more clearly; 2) to learn of ways in which they can be modified or ameliorated so as to minimize

their impact upon not only the racial dimensions in schools, but the opportunities of students for a full and rewarding adult life; and 3) to pursue alternative strategies which can be implemented to foster integration and also allow for the diagnostic function in education to be a helping and beneficial service.

PART 11

A study of the rapidly accumulating social science data on the processes of resegregation indicates that these phenomena are not restricted to any specific geographic or socio-economic locale. In addition, these data serve to expose a more fundamental issue as well--the failure of American public education to provide a quality educational experience for all children. As Flannery has noted in this regard the issue of desegregation and resegregation can be seen as components of the larger issue of equality of educational opportunity. "Desegregation has exposed the problems that exist in school systems which have been papered over because the schools have been permitted to be ethnically homogeneous."⁷

Quote after quote similar to that of Flannery's could be cited in this view, but it would only be a reiteration of the obvious to say that not all children are receiving a quality education in American society. Both popularized accounts and systematic research efforts have reported on the disparities within the public school systems across the country.

7. Flannery, Harold J., "The Role of The Courts in Educational Change" INTERGROUP, January, 1972, p.9

An examination of these disparities by the National Education Association's Task Force on Human Rights brought them to conclude in their 1968 report:

The education available to the children of the poor is inferior in regard to the amount and quality of facilities and supplies, the kind and quality of curriculum offered, the quality of teaching and testing materials, and in the preparation and experience of the professional staff. (p. 32)⁸

The Task Force further concluded:

We find neglected and dilapidated physical plants; a lack of supplies and facilities; high faculty turnover rates; questionable teacher assignments and reassignment policies; an inequitable distribution of qualified teachers; questionable curriculum standards; faculty uncertainty with respect to students' abilities and needs; programs and curriculum poorly administered and for the most part leading nowhere; high student dropout rates because of students experience little satisfaction with their school life; and students being passed on from grade to grade, always taught "at their level of need" and reaching high school simply unprepared to effectively pursue a high school course of study as it is now constituted, and who will eventually quit school or graduate into a wasteland...pp.32-33)⁹

8. Report of the Task Force on Human Rights - National Education Association November, 1968

9. Ibid. pp. 32-33

The implication of summaries such as this and the research of many others as well is that regardless of how one wishes to define "equality of educational opportunity" not all children have it. Whether one wishes to define such equality in terms of equal access to inputs (facilities, teachers, curriculum materials, etc.) or to outputs (achievement scores, graduation, equal adult opportunities, etc.), it is apparent that it is differentially distributed in the population. Furthermore, it appears evident that the processes of resegregation contribute to the lack of equality in the public schools, both by negating equal access to the total school resources as well as by inhibiting the opportunities and options available when finished with schooling. For these reasons, in addition to the fact that resegregation negates the nurturing and development of quality integrated settings, it is both necessary and proper that the Desegregation Studies Unit address itself to the study of these processes.

Key Researchable Questions

In addressing itself to the study of resegregation with an eye towards developing means to minimize its impact upon the processes of desegregation, the following are seen by the Desegregation Studies Unit as key questions to be addressed at this time. Such questions are at the very center of present research and planning efforts in the Unit. ¹⁰ They are offered here in admittedly brief form.

10. The Unit staff recognizes that these questions are not exhaustive and would welcome comments, suggestions, or additions to the list.

White Flight:

- 1) Why does white flight occur in some cities undergoing school desegregation and not in others?
- 2) What impact does the availability of private and parochial schools have upon white flight?
- 3) Are there variations in white flight contingent upon the particular form and process of implementing school desegregation?
- 4) Does white flight slow down, stop, or continue at previous rates in cities where metropolitan desegregation plans are in effect?
- 5) Do innovations within school systems (magnet schools, etc.) influence the presence or absence of white flight?
- 6) For both the percentage minority in the school district, is there a "tipping point" which influences the presence or absence of white flight?

Suspensions and Expulsions:

- 1) Are there variations in the suspension and expulsion policies between those desegregated school districts with high rates and those with low rates?
- 2) Do variations in suspension and expulsion rates vary with the particular form and process of implementing school integration?

- 3) As desegregation occurs over time in a school district, can one assume there will be variations over time in rates? If such rates do occur, are ameliorative mechanisms available?
- 4) Do variations in adjudicating suspensions and expulsions within desegregated school districts affect rates?
- 5) What mechanisms appear most beneficial to school districts in ensuring equal and fair procedures with respect to suspensions and expulsions?
- 6) What are the long term consequences for both the academic and adult career options arising from suspension and or expulsion?

Test, Tracking, and Ability Grouping:

- 1) In what degree are universalistic vs. particularistic evaluation criteria necessary in integrated school settings to avoid resegregation?
- 2) What do we know of exemplary integrated school districts where evaluation criteria have not resulted in resegregation?
- 3) In those schools and school districts where ability grouping and tracking have led to resegregation, what policies fostered such outcomes?
- 4) Given the research evidence of the high percentage of school districts employing both between and within classroom ability grouping, are there both short-term and long-term methods

available to minimize the impact on such grouping procedures upon resegregation?

It is with these questions in mind that the Desegregation Studies Unit is pursuing the development of its research for the study and analysis of the processes of resegregation. It is recognized that some very basic questions concerning the policies and procedures of a large number of school districts in the United States are being questioned. But it is believed that without a scrutiny and understanding of how resegregation works to thwart the establishment of viable and humane integrated educational settings, the accomplishment of the goals espoused in the Brown decision more than two decades ago will continue to elude us.
